

PROCOM

Precise grommet assembly on connector housing

The PROCOM allows the gentle, accurate, and fast assembly of grommets on to the connector housing – in which the grommet seals the open space between cable and connector housing without damaging the cable, contacts, or the plug connection.

In order to create the starting point for this process, the grommet needs to be preassembled – e.g. with the support of the EXTENODR equipment. The PROCOM allows the optimization of this delicate process through the application of the combined AIRSTREAM- and EXPANSION- Technology. A machine cycle of 5 sec. can be achieved, depending of the production material.

The PROCOM is delivered individually adjusted, according to results of intensive testing of sample material.

Technical data:

Dimensions in mm (LxWxH)	840 x 620 x 875
Weight	65 kg
Pressure	7 bar
Voltage	110/230 V 50/60 Hz
